EDUCATION

Minuto de Dios University Corporation (UNIMINUTO) <i>Technologist Degree in Software Development</i>	Villavicencio, Co 2024 - Present
Universidad de los Llanos <i>English Program (B2 Level - Vantage)</i>	Villavicencio, Co 2023 - 2025
Nuestra Señora de Fátima (PONAL) <i>High School Degree</i> <i>Academic Excellence Recognition</i>	Villavicencio, Co 2023

EXPERIENCE

<u>NOBUGS</u> Junior Backend Developer	Villavicencio, Co - Remote Feb 2026 – Present
• Develop and maintain backend features for a ticket management platform using Spring Boot and PostgreSQL • Design and implement seat management system, including seat maps, selection, locking, and purchase workflows • Identify and fix critical bugs, including inconsistencies in ticket commission calculations and N+1 query issues • Build and optimize SQL queries for analytics and superadmin dashboard statistics • Implement scheduled tasks (cron jobs) and integrate ShedLock to ensure consistency across distributed instances • Document APIs using Swagger and Scalar for improved maintainability and integration • Refactor data storage by replacing static HTML/PDF persistence with dynamic generation during email workflows • Perform database refactoring and normalization, including schema changes, data migration, and incremental backend updates • Update DTOs and domain models to support new features and ensure data consistency across endpoints	
Minuto de Dios University Corporation (UNIMINUTO) Relational Databases Mentor	Villavicencio, Co Sep 2025 – Nov 2025
• Provided academic support in relational database technologies (MySQL and PostgreSQL) • Conducted practical sessions on data modeling, normalization, and SQL queries • Strengthened students' technical skills through guided exercises and problem-solving • Promoted autonomous learning and critical thinking in database concepts	

PROJECTS

Data Migration and Synchronization System — Personal Project

- Designed and implemented a terminal-based application using Node.js for data migration from a primary relational database (NeonDB) to local PostgreSQL and MongoDB Atlas
- Developed data synchronization processes to propagate changes from MongoDB to the main relational database
- Developed a lightweight FastAPI service to convert MongoDB operations into SQL queries, integrated via HTTP with the main backend
- Utilized technologies including Node.js, PostgreSQL, MongoDB, Python, and FastAPI

Hotel Reservation Management Backend — Hackathon Project

- Developed a modular backend API for managing reservations, rooms, requests, employees, pricing, and additional services
- Implemented strict data validation using Zod to ensure data integrity across endpoints
- Designed authentication and authorization system using JWT stored in HTTP-only cookies for secure access control
- Generated Excel (XLSX) reports consolidating multiple datasets into multi-sheet files
- Implemented email notification system for user and system events
- Documented API using Swagger/Scalar to improve usability and maintainability
- Utilized technologies including Node.js, Express, PostgreSQL, JWT, Zod, and Swagger/Scalar

CERTIFICATIONS

Java Object-Oriented Programming

- 36 hours of training

Alura Latam

February 2026

Git and GitHub

- 8 hours of training

Crehana

April 2025

Building GenAI Applications with MongoDB

- 8 hours of training

MongoDB

October 2025

Exploratory Data Analysis in Python

- 48 hours of training

SENA

October 2025

LEADERSHIP & ACTIVITIES

Hackathon Participant — Operación HackQuest

May 2025 | In-person

- Participated in a collaborative hackathon focused on problem-solving and rapid software development

Hackathon Participant — Retos de Transformación Digital 4RI

October 2025 – December 2025 | Hybrid

- Designed and developed the backend and database architecture for a hotel reservation management system
- Implemented features for managing rooms, reservations, services, and administrative roles
- Built authentication and authorization system and integrated email notifications for reservation workflows
- Developed reporting functionality with Excel export for financial tracking
- Worked as Backend Developer and Database Designer in a collaborative hackathon environment

SKILLS & INTERESTS

Technical:

- Programming Languages: Java, JavaScript (Intermediate), Python (Beginner)
- Frameworks & Tools: Spring Boot, Node.js, Express (Intermediate), FastAPI (Beginner)
- Databases: MySQL, PostgreSQL, MongoDB, Supabase (Intermediate)
- Cloud: AWS (Beginner)
- Other: REST APIs, Git, GitHub, JWT, Flyway, Zod, Swagger, Hexagonal Architecture

Languages:

- Spanish: Native
- English: B2 (Upper-Intermediate)

Interests:

- Playing basketball
- Learning piano
- Building small-scale servers
